Re: Sanford Maine Tower

Dear Ron,

Per your request we have completed the layout work for the installation of the antenna arrays on the Sanford, Maine Tower. We have measured the installed antenna array and find it to adhere to the physical specifications set forth in the Shively Labs Proof of Performance, S.O. 27841 for WSEW, Sanford, Maine, namely the antenna azimuths of 117°, and 305° which were measured and determined to be within the ± 1 degree accuracy.

Please feel free to contact me with any questions.

Respectfully,

Dana A. Libby, PLS 1350
